

1. How long did you spend on the code test?

The code test took me about 4 hours 30 mins

2. What went well?

Everything went well just had to make revision of the flux architecture as it has been a while because I often work with redux.

3. Was there anything that was attempted but was not possible to get working in the time so is not visible in the code?

There isn't any prop validation nor input validation. Also, there isn't logic to handle situation when a user reloads the page after component is mounted on the data pages.

4. What would you do to improve it / continue development?

I would make a better tabular description and display of the data, I would complete data validation and confirm the meanings of the Imperial and Metric units so the user can see the values with more meaning to them. Also, I will handle state where the user reloads the data pages.
